

Glacier National Park Swift Current Rehabilitation

CCM Construction is dedicated to providing decorative precast concrete that cater to your needs with care, quality, and innovation.

Pictured below is a recent project in Glacier National Park. The parking lot had old wood logs that were used as curb and functioned great but deteriorated over time. CCM used the old logs in the parking lot and molded forms to match the exact texture of the log. Pouring precast logs at our Helena shop and transporting the pieces up to Glacier saved time and allowed for consistent curing. The CCM crew traveled and installed the precast logs and wheelstops on site and also poured and finished the exposed aggregate sidewalk.

Now with the beauty of wood and the longevity of concrete this curb will be around for many decades.

Concrete log curb set on sight with exposed aggregate sidewalk.

Precast concrete wheelstop

Every great project starts with a conversation.
